

# MODERN LIVING. PERFECTLY ENGINEERED.

The way we incorporate windows and doors into our homes is changing, as we look to improved product performance, energy efficiency and sound reduction. System 76 from Kommerling is a German designed, window and door system that's distributed throughout the world.

These European style tilt and turn windows offer greater functionality and performance, whether you are an architect, building professional or homeowner.

## DESIGN & ARCHITECTURE.

We can offer a huge range of options to blend in with the external fabric of any domestic or commercial building, with sympathetic internal finishes regardless of room type, purpose or furnishings. Solid colours and rich woodgrains are popular options, alongside the classic white finish, while some architects specify our unique aluminium AluClip cladding system.

### Classic White

White still remains our most popular finish, with its elegant and clean finish. As a neutral color, it can integrate within any type of building fabric and finish, both inside and out.

### Woodgrains and Colours

With a choice of rich golden oak, anthracite grey, or cylon black, there's a durable finish to meet the most exacting of projects. It's also a foiled laminate that's been developed to offer unrivalled long-term performance.

### AluClip Cladding

As well as a number of colored and woodgrain options, we can also offer an aluminium exterior which is available in literally hundreds of different colours and this includes our new slim sightline Lux variant.

## FEATURES & BENEFITS.

System 76 is a window and door system perfect for any home remodeling or new construction project.

- Clever 6-chambered design offers incredible levels of energy efficiency and sound reduction.
- Wide option of colours and woodgrains, along with the innovative AluClip cladding.
- Suitable for double and triple glazing.
- Dedicated profiles for residential entrance doors and double/terrace swing doors available.
- Multi-point locking secures the window around all four corners of the opening.
- Similar high standards of locking are offered for opening doors. Multi-point locking secures the window around all four corners
- Premium hardware in terms of handles and hinges

# ARCHITECTS & BUILDING PROFESSIONALS.

We can offer a wide range of opening options with fixed lights above or to the side of any window or door opening, along with large picture windows due to the inherent strength of our vinyl windows. Door design options include stylish entrance doors and double or terrace swing doors, each fully complementing window design and we can also incorporate steel reinforcement, for added structural stability.
